

*Providing solutions*

**To give your boat the lift it deserves**

**Marsol International** is the distributor for **No Profile Boat Lifts**. The system was developed and built to accomplish two things; firstly the lifts' working machinery must be "invisible" and secondly the lifts must withstand the high salt content of the seawater in the Middle East.

There are three styles of boat lifts to suit your needs and they all take into consideration the environment and visual appearance when constructing the lifts. With the patented technology, the **No Profile Boat Lifts** are in a class of their own. The **No Profile Boat Lift** ensures the highest customer satisfaction and visual appeal. The perfect solution for any marina development!

**No Profile Boat Lifts Available**

**Platform Boat Lift:** Addresses all accessibility issues with access from all sides as it has a flat deck supported on piling.

**Cradle Boat Lift:** Utilises the same technology but without the deck. Catwalks are installed on either side of the lift for easy access.

**Floater Boat Lift:** Offers an aesthetically pleasing boat lift with or without piling. This can be attached directly onto existing jetty structures.

**Special Features of the No Profile system**

- Patented auto leveling system
- Long range remote control unit
- Smooth, quick operating and no regular maintenance
- Helping disabled people to perform activities
- An "Integral" aluminum housing is used to protect the lift components and motor from the harsh sea environment
- Improving your dock on a visual level
- Attractive, user and installer-friendly
